## EDUCATION

**Northwestern University,** Evanston, IL **Expected Graduation:** June 2029
***Bachelor of Science*|Electrical Engineering|3.79/4.0**
**Awards:** Fall 2025, Winter 2026, Spring 2026 Dean's List
**Relevant Coursework:** Intro to Electrical Engineering, Engineering Analysis, Design Thinking, and Communication

## SKILLS AND INTERESTS

**Software:** Python, MATLAB, KiCad, SolidWorks, LTspice, Photoshop, Excel
**Hardware & Lab:** PCB Design, Soldering & Wiring, Oscilloscope, Multimeter
**Machining:** Mill, Lathe, Drill Press, Vertical Bandsaw
**Languages:** English, Arabic (Fluent)

## EXPERIENCE

**Northwestern HAND ERC/Haptics Laboratory** ***Evanston, IL***
*Undergraduate Research Assistant* *June 2026 - Present*

- Design a specialized Capacitance-to-Digital Converter (CDC) for a realistic robotic hand that reads a scalable array of capacitive sensors at 1000 Hz
- Enabling a Teensy 4.1 to track capacitance changes under applied pressure by analyzing data using MATLAB to calculate capacitance from voltage outputs read across various capacitive sensors to debug a 2-stage op-amp integrator and ADC circuit with an oscilloscope and multimeter
- Select components for miniature printed circuit board (PCB) schematics for the CDC to fit onto the phalanges of a robotic hand
- Present progress and findings at weekly meetings using circuit diagrams and data plots and apply feedback from colleagues and professors to progress research efforts

**Northwestern Student Affairs IT** ***Evanston, IL***
*Computer Support Technician* *October 2025 - Present*

- Disassemble and assemble personal computers, replacing components & wiping hard drives
- Review and fulfill service requests from students, staff, and faculty by answering calls and engaging 3-5 community members per shift

## PROJECTS

**Northwestern Baja Society of Automotive Engineers**
*Electronics Engineer* *September 2026 - Present*

- Designer of front data acquisition and HUD printed circuit boards (PCBs) using KiCad, measuring suspension travel with linear potentiometers and wheel speed with Hall-effect sensors
- Implement GPS (NEO-F10N) and LoRa radio (RFM95W) telemetry for the '27 car, enabling real-time location tracking and data transmission during competition
- Integrate KiCad-designed PCBs and a 2.42" OLED display into the steering wheel to show live data to the driver, allowing informed decision making as the team tests and races with the 27' car for the Baja SAE competition
- Machine parts, solder, and wire various components such as PCBs, couplers, gears, and components of the electronically controlled continuously variable transmission using a mill, lathe, and soldering equipment

**NU Space Technology and Rocketry Society**
*Lunabotics Member* *September 2025 - June 2026*

- Supported electrical wiring of a custom-made logic gate circuit for the motors of the Lunabotics rover
- Connected with team leads to stay aware of new developments in preparation for NASA's Lunabotics design competition
